

ZAK MCP Gateway v0.1

2–3 Oct 2026 · First scaffold

The first version: one MCP server in front of many, exposing two small meta-tools instead of every tool's schema.

In one picture: A concierge desk opens: instead of 40 service counters, one desk that knows where everything is.

What's new

Feature	What it does (simply)	Where to switch it
Two meta-tools	<code>mcp_search_tools</code> finds a tool; <code>mcp_call_tool</code> runs it.	–
BM25 tool search	MiniSearch over tool names and descriptions.	<code>discovery.maxSearchResults</code>
Short signatures	JSON Schema → one TypeScript-style line.	–
Exact-match cache	SHA-256 of tool + arguments; repeat reads answered from memory.	cache.*
Projection + null pruning	Keep only requested fields; drop empty values.	<code>project_fields</code>
Docs	Whitepaper, implementation roadmap, concept explainer.	docs/

Measured

What	Result
Measured results	None yet: the early documents contained projections, not measurements.

Notes

- Several bugs in this version were found and fixed in v0.2 (cache key collision, caching never on, double-encoded results, GitHub token placeholder).
