

ZAK MCP Gateway v0.3

5 Oct 2026 · Economy upgrade: fewer turns

All 14 ideas of the economy plan plus 6 extras: fewer and smaller turns, big data kept inside the gateway, and precision helpers for any client.

In one picture: One trip with a shopping list instead of one trip per item; parcels forwarded without being opened.

What's new

Feature	What it does (simply)	Where to switch it
Per-server result modes	full / light / off, per-server limits; compact servers stop being re-paged.	mcpServers.*.results
Compact search	Top hit as a full signature, the rest as name + summary.	discovery.fullSignatures
Catalog modes + hot signatures	names / groups / servers / off; most-used tools listed up front.	discovery.catalog , hotSignatures
Forwarded server instructions, synonyms, default args	Server guidance kept; domain words; page size or field selection injected.	forwardInstructions, synonyms, defaultArgs
Batch calls	Several calls in one turn; writes previewed and confirmed once.	mcp_call_tool calls
Aggregation + path	count / group_by / distinct / sort; one field in full.	mcp_get_result
Safe cache	Per-tool access, writelf, cache groups, TTL, fresh.	access, writelf, cacheGroup
Write receipts, \$ref + patch, dedupe	Short write replies; stored data passed into the next call; repeats as pointers.	results.writeReceipts , dedupe
Rules + skills	Rules in every session; skills listed and loaded on demand.	knowledge.*
Elicitation / sampling pass-through	Downstream servers can ask the user or the model.	clientFeatures.*
Sandboxed code mode	Separate process, no file access, memory cap, hard timeout.	codeMode.*
Agent UI helpers	Focused tools, history trimming, answer verifier, skill preload.	agent-ui/

Fixed

Problem	Result
Compact replies re-paged under one global limit	Per-server limits and light mode
Raw paging cut lines silently	CLIPPED notice
Server instructions dropped	Forwarded, capped

path meant per row (found live with Gemini)	Falls back to a per-row field
Verifier matched numbers inside longer IDs	Whole-token matching

Measured

What	Result
GitHub, 8 tasks, agent-run input	none 1,085,806 · v0.2 74,019 · v0.3 48,465–71,827
Company lean server, light task (6 Oct)	lean 98,493 → gateway 41,054 (–58%)
Company lean server, heavy build task	lean + batch 201,090 → gateway 102,628 (–49%), 24/24 database checks
Remaining cost (lean test)	8 searches = 46% of result tokens; tool list = most of the rest

Notes

- The lean test pointed at the next lever: remove searches before writes and cut the fixed cost of every turn.
